MATTHEW J. DYKMAN
CLERK

In the Matter of the Search of)
 (Briefly describe the property to be searched)
 or identify the person by name and address))
 Residential property and premises located at 525)
 Chelwood Park Blvd NE, Albuquerque, NM, 87123,)
 as more fully described in Attachment A.)

Case No.

15mc 461

APPLICATION FOR A SEARCH WARRANT

I, a federal law enforcement officer or an attorney for the government, request a search warrant and state under penalty of perjury that I have reason to believe that there is now concealed on the following person or property located in the _____ District of _____ New Mexico (identify the person or describe property to be searched and give its location): Residential property and premises located at 525 Chelwood Park Blvd NE, Albuquerque, NM, consists of a single story red brick home, single family dwelling with a tall white fence, in a residential area. The number "525" is listed horizontally on the front of the residence, near the driveway.

The person or property to be searched, described above, is believed to conceal (identify the person or describe the property to be seized): Evidence of, or contraband, fruits of, or other items related to the offense of 18 U.S.C. 2252, Distribution, Receipt, and Possession of visual depictions of minors engaged in sexually explicit conduct, as described in Attachment B incorporated herein by reference.

The basis for the search under Fed. R. Crim. P. 41(c) is (check one or more):

- ☒ evidence of a crime;
☒ contraband, fruits of crime, or other items illegally possessed;
☒ property designed for use, intended for use, or used in committing a crime;
☐ a person to be arrested or a person who is unlawfully restrained.

The search is related to a violation of 18 U.S.C. § 2252, and the application is based on these facts: See attached Affidavit, incorporated herein by reference.

☒ Continued on the attached sheet.

☐ Delayed notice of _____ days (give exact ending date if more than 30 days: _____) is requested under 18 U.S.C. § 3103a, the basis of which is set forth on the attached sheet.

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF NEW MEXICO

IN THE MATTER OF THE SEARCH OF

The residential property and premises located at 525 Chelwood Park Blvd NE, Albuquerque, NM, 87123

Described in Attachment A

Incorporated herein by reference

AFFIDAVIT OF SPECIAL AGENT CHRISTINA ALTAMIRANO

I, Christina Altamirano, being duly sworn, hereby declare and state as follows:

Your Affiant is a Special Agent with the Department of Homeland Security, Homeland Security Investigations, hereafter referred to as HSI, and has been employed by HSI as such since October 2009. Your Affiant is currently assigned to the Assistant Special Agent in Charge, Albuquerque, NM, where your Affiant is assigned to investigate individuals involved in the exploitation of minors including violations of 18 U.S.C. §§ 2252, which makes it a crime to distribute and attempt to distribute child pornography. Your Affiant has worked many child pornography and child exploitation investigations and has been trained in the investigation of computer related child exploitation and child pornography cases by the Department of Homeland Security and the Internet Crimes Against Children Task Force. Your Affiant has successfully completed the Internet Crimes Against Children Undercover Chat Investigations. During the investigation of these cases, your Affiant has executed, or participated in the execution of, numerous search warrants and seized evidence of these violations.

Your Affiant successfully completed twelve weeks of Criminal Investigator Training at the Federal Law Enforcement Training Center (FLETC) in Glynco, Georgia. In addition, your Affiant completed twelve weeks of Special Agent Training with Immigration and Customs Enforcement, also at FLETC. Your Affiant holds a Bachelor's Degree in Accounting from New Mexico State University and a Master's Degree in Human Resource Management from Webster University.

This affidavit is made in support of an application for a warrant to search the residential property and premises located at 525 Chelwood Park Blvd NE, Albuquerque, NM, 87123, as described in Attachment A, incorporated herein by reference, and to search for, seize and examine items, as more particularly described in Attachment B, incorporated herein by reference.

This affidavit is based upon information your Affiant has gained through investigation, training and experience, as well as information from other law enforcement officers, whom your Affiant believes to be reliable. Since this affidavit is being submitted for the limited purpose of securing a search warrant, your Affiant has not included each and every fact known to her concerning this investigation. Your Affiant has set forth only the facts that she believes are necessary to establish probable cause to believe instrumentalities, fruits, and evidence of a

violation of 18 U.S.C. §§ 2252 are located at the residential property and premises 525 Chelwood Park Blvd NE, Albuquerque, NM, 87123, as more particularly described in Attachment A, incorporated herein by reference, and to search for, seize and examine items, as more particularly described in Attachment B, incorporated herein by reference.

I. BACKGROUND AND SUMMARY OF INVESTIGATION

The Internet is a worldwide network of computer systems operated by governmental entities, corporations, and universities. In order to access the Internet, an individual computer user must subscribe to an access provider, which operates a host computer system with direct access to the Internet. The World Wide Web (www) is a functionality of the Internet, which allows users of the Internet to share information.

A growing phenomenon on the Internet is Peer-To-Peer (P2P) file sharing. P2P file sharing programs are a standard way to transfer files from one computer system to another while connected to a network, usually the Internet. P2P file sharing programs allow groups of computers using the same file sharing network and protocols to connect directly to each other to share files. There are several P2P networks currently operating, these include the "BitTorrent" network.

Your Affiant knows from training and experience that P2P file sharing networks, including the BitTorrent network, are frequently used to trade digital files of child pornography. These files, of child pornography, include both image and movie files.

Many P2P file sharing networks are designed to allow users to download files and frequently provide enhanced capabilities to reward the sharing of files by providing reduced wait periods, higher user ratings, or other benefits. In some instances, users are not allowed to download files if they are not sharing files. Typically, settings within these programs control sharing thresholds.

With a computer connected to the Internet, an individual computer user can make electronic contact with millions of computers around the world. This connection can be made by any number of means, including modem, local area network, and wireless.

To access the P2P networks, a user first obtains the P2P software, which can be downloaded from the Internet. This software is used exclusively for the purpose of sharing digital files. When the P2P software is installed on a computer, the user is directed to specify a "shared" folder. All files placed in that user's "shared" folder are available to anyone on the world-wide network for download. Most P2P software gives each user a rating based on the number of files he/she is contributing to the network. This rating affects the user's ability to download files. The more files a user is sharing, the greater his/her ability is to download files. This rating system is intended to encourage users to "share" their files, thus propagating the P2P network. However, a user is not required to share files to utilize the P2P network.

A user obtains files by conducting keyword searches of the P2P network. When a user initially logs onto the P2P network, a list of the files that the user is sharing is transmitted to the network. The P2P software then matches files in these file lists to keyword search requests from

other users. A user looking to download files simply conducts a keyword search. The results of the keyword search are displayed and the user then selects file(s) which he/she wants to download. The download of a file is achieved through a direct connection between the computer requesting the file and the computer(s) hosting the file. Once a file has been downloaded, it is stored in the area previously designated by the user and will remain there until moved or deleted. Most of the P2P software applications keep logs of each download event. Frequently, a computer forensic examiner, using these logs, can determine the Internet Protocol ("IP") address from which a particular file was obtained.

Thus, a person interested in sharing child pornography with others in the P2P network, need only place those files in his/her "shared" folder(s). Those child pornography files are then available to all users of the P2P network for download regardless of their physical location. For instance, a person interested in obtaining child pornography can open the P2P application on his/her computer and conduct a keyword search for files using a common child pornography term such as "preteen sex." The keyword search would return results of files being shared on the P2P network that match the term "preteen sex." The user can then select files from the search results and those files can be downloaded directly from the computer(s) sharing those files.

One of the advantages of P2P file sharing is that multiple files may be downloaded in parallel. This means that the user can download more than one file at a time. In addition, a user may download parts of one file from more than one source computer at a time. For example, a user downloading an image file may actually receive parts of the image from multiple computers. This reduces the time it takes to download the file.

P2P networks can only succeed in reassembling the file from different parts if the parts all come from the same original file. Multiple persons sharing one file can deliver different pieces of that file to the local software and the local software can insure that a complete and exact copy can be made from the parts. Use of the software has confirmed that different copies of the same file can be named differently.

P2P networks use "hash values" to insure that two files are exactly the same. A Hash value is a number that uniquely identifies the contents of a file. The value is generated by, applying a mathematical algorithm to a file, which assesses the contents of the file. There are several types of algorithms that can be applied; SHA1, MD5, and MD4 are common algorithms. A hash value is generated by a software program has "hashes" or "evaluates" the contents of the file and generates the unique number identifying the contents of the file.

Hash values are a very reliable method of authenticating files. If the same mathematical algorithm is applied to two files, two hash values will be generated. If the two hash values match, one can conclude, with a great deal of certainty, that the contents of both files are identical.

Files on the BitTorrent network:

- The BitTorrent network is a very popular and publically available P2P file sharing network. Most computers that are part of this network are referred to as "peers" or

“clients”. A peer/client can simultaneously provide files to some peers/clients while downloading files from other peers/clients.

- The BitTorrent network can be accessed by peer/client computers via many different BitTorrent network client (software) programs, examples of which include the BitTorrent client program, uTorrent client program, and Vuze client program, among others. These client programs are publically available and typically free P2P client software programs that can be downloaded from the Internet.
- During the installation of typical BitTorrent network client programs, various settings are established which configure the host computer to share files via automatic uploading. Typically, as users download files or pieces of files from other peers/clients on the BitTorrent network, other users (peers/clients) on the network are able to download the files or pieces of files from them, a process which maximizes the download speeds for all users on the network. Once a user has completed the download of an entire file or files, they can also continue to share the file with individuals on the BitTorrent network who are attempting to download all pieces of the file or files, a process referred to as “seeding”.
- Files or sets of files are shared on the BitTorrent network via the use of “Torrents”. A “Torrent” is typically a small file that describes the file(s) to be shared. It is important to note that “Torrent” files do not contain the actual file(s) to be shared, but information about the file(s) to be shared needed to accomplish a download. This information includes things such as the name(s) of the file(s) being referenced in the “Torrent” and the “info hash” of the “Torrent”. The “info hash” is a SHA-1 hash value of the set of data describing the file(s) referenced in the “Torrent”. This set of data includes the SHA-1 hash value of each file piece in the torrent, the file size(s), and the file name(s). The “info hash” of each “Torrent” uniquely identifies the “Torrent” file on the BitTorrent network. The “Torrent” file may also contain information on how to locate file(s) referenced in the “Torrent” by identifying “Trackers”. “Trackers” are computers on the BitTorrent network that collate information about the peers/clients that have recently reported they are sharing the file(s) referenced in the “Torrent” file. A “Tracker” is only a pointer to peers/clients on the network who may be sharing part or all of the file(s) referenced in the “Torrent”. “Trackers” do not actually have the file(s) but are used to facilitate the finding of other peers/clients that have the entire file(s) or at least a portion of the file(s) available for sharing. It should also be noted that the use of “Tracker(s)” on the BitTorrent network are not always necessary to locate peers/clients that have file(s) being shared from a particular “Torrent” file. There are many publically available servers on the Internet that provide BitTorrent tracker services.
- In order to locate “Torrent” files of interest and download the files that they describe, a typical user will use keyword searches on torrent indexing websites, examples of which include isohhunt.com and the piratebay.org. Torrent indexing websites are essentially search engines that users on the BitTorrent network use to locate “Torrent” files that describe the files they are looking to download. Torrent indexing websites do not actually host the content (files) described by “Torrent” files, only the “Torrent” files

themselves. Once a "Torrent" file is located on the website that meets a user's keyword search criteria, the user will download the "Torrent" file to their computer. The BitTorrent network client program on the user's computer will then process that "Torrent" file in order to find "Trackers" or utilize other means that will help facilitate finding other peers/clients on the network that have all or part of the file(s) referenced in the "Torrent" file. It is again important to note that the actual file(s) referenced in the "Torrent" are actually obtained directly from other peers/clients on the BitTorrent network and not the "Trackers" themselves. Typically, the "Trackers" on the network return information about remote peers/clients that have recently reported they have the same file(s) available for sharing (based on SHA-1 "info hash" value comparison), or parts of the same file(s), referenced in the "Torrent", to include the remote peers/clients Internet Protocol (IP) addresses.

- For example, a person interested in obtaining child pornographic images or videos on the BitTorrent network can go to a torrent indexing website and conduct a keyword search using a term such as "preteen sex" or "pthc" (pre-teen hardcore). The results of the keyword search are typically returned to the user's computer by displaying them on the torrent indexing website. Based on the results of the keyword search, the user would then select a "Torrent" of interest to them to download to their computer from the website. Typically, the BitTorrent client program will then process the "Torrent" file. Utilizing trackers and other BitTorrent network protocols, peers/clients are located that have recently reported they have the file(s) or parts of the file(s) referenced in the "Torrent" file available for sharing. The file or files are then downloaded directly from the computer(s) sharing the file or files. Typically, once the BitTorrent network client has downloaded part of a file or files, it may immediately begin sharing the part of the file or files it has with other users on the network. The BitTorrent network client program succeeds in reassembling the file(s) from different sources only if it receives "pieces" with the exact SHA-1 hash value of that piece which is described in the "Torrent" file. The downloaded file or files are then stored in an area (folder) previously designated by the user and/or the client program on the user's computer or designated external storage media. The downloaded file or files, including the torrent file, will remain in that location until moved or deleted by the user.
- Law Enforcement can search the BitTorrent network in order to locate individuals sharing previously identified child exploitation material in the same way a user searches this network. To search the network for these known torrents can quickly identify targets in their jurisdiction. Law Enforcement receives this information from "Trackers" about peers/clients on the BitTorrent network recently reporting that they are involved in sharing digital files of known or suspected child pornography, based on "info hash" SHA-1 hash values of torrents. These torrents being searched for are those that have been previously identified by law enforcement as being associated with such files. There are BitTorrent network client programs which allow for single-source downloads from a computer at a single IP address, meaning that an entire file or files are downloaded only from a computer at a single IP address as opposed to obtaining the file from multiple peers/clients on the BitTorrent network. This procedure allows for the detection and

investigation of those computers involved in sharing digital files of known or suspected child pornography on the BitTorrent network.

- During the query and/or downloading process from a suspect BitTorrent network client, certain information may be exchanged between the investigator's BitTorrent client program and the suspect client program they are querying and/or downloading a file from. This information includes 1) the suspect client's IP address; 2) a confirmation from the suspect client that they have pieces of the file(s) being requested, in whole or in part, and that the pieces of the file(s) is being reported as shared from the suspect client program; and 3) the BitTorrent network client program and version being utilized by the suspect computer. The law enforcement has the ability to log this information.
- The investigation of peer-to-peer file sharing networks is a cooperative effort of law enforcement agencies around the country. Many of these agencies are associated with the Internet Crimes against Children Task Force Program. P2P investigative methodology has led to the issuance and execution of search warrants around the country resulting in the arrest and conviction of numerous offenders possessing and/or distributing child pornography, some of which were also involved in the sexual exploitation of actual child victims.

A P2P file transfer is assisted by reference to an Internet Protocol (IP) address. This address, expressed as four numbers separated by decimal points, is unique to a particular Internet connection during an online session. The IP address provides a unique location making it possible for data to be transferred between computers.

Even though the P2P network links together computers all over the world and users can download files, it is not possible for one user to send or upload a file to another user of the P2P network. The software is designed only to allow files to be downloaded that have been selected. One does not have the ability to send files from his/her computer to another user's computer without their permission or knowledge. Therefore, it is not possible for one user to send or upload child pornography files to another user's computer without his/her active participation.

Your Affiant knows from training and experience, that computers and other devices, which are connected to or previously connected to the Internet, identify each other by an Internet Protocol or IP address. Your Affiant knows that these IP addresses can assist law enforcement in finding a particular computer on the Internet. These IP addresses can typically lead the law enforcement officer to a particular Internet service company and that company can typically identify the account and property that uses the IP address to access the Internet.

Your Affiant knows that searching on the peer-to-peer network as described below can result in your Affiant receiving a list of IP addresses identifying locations where a computer has software installed and individual files have been reported as available for trade with a specific digital signature.

Your Affiant knows a records request to an Internet service provider can result in your Affiant receiving a specific address that corresponds with the use of a computer. This address is the most frequent method of locating the actual computer involved in criminal activity.

The returned list of IP addresses can include computers that are likely to be within this jurisdiction. The ability to identify the approximate location of these IP address is provided by IP geographic mapping services, which are publicly available and also used for marketing and fraud detection. At this point in the investigative process, a recent association between a known child pornography file (based upon MD4 root hash comparison or SHA1) and a computer having a specific IP address (likely to be located within a specific region) can be established. Once this association has been established, an investigator can attempt to download the file from the associated user or view the contents of the shared directory.

Depending on the associated user configuration and available peer resources a listing of the files being shared may be displayed. In order to obtain this list of files, a direct connection between the computers must occur. This list can be a partial listing of the shared files. The file list can only be obtained if the associated peer is connected to the network and running a P2P client at that moment.

By receiving either a file list or portions of a download from a specific IP address the investigator can conclude that a computer, likely to be in this jurisdiction, is running a P2P client and possessing, receiving and/or distributing visual depictions of child pornography.

This investigation of P2P file sharing networks is a cooperative effort of law enforcement agencies around the country. Many of these agencies are associated with the Internet Crimes Against Children Task Force Program, Homeland Security Investigations, or the Federal Bureau of Investigation. Many of the officers involved in this effort are using the technology and methods described herein. This methodology has led to the issuance and execution of search warrants around the country resulting in many seizures of child pornography and arrests for possession, distribution and receipt of child pornography.

CURRENT INVESTIGATION

On December 7, 2014, Special Agent (SA) Owen Pena, New Mexico Attorney General's Office, was conducting an online investigation on the BitTorrent network for offenders sharing child pornography. SA Pena directed his investigative focus to a device at IP address **73.42.115.110 (Port: 6881)**, because it was associated with a torrent with the InfoHash: **49cd35df95b12d8dc8c025293d2ad50c24b8c854**. This torrent file references 35 files, at least one of which was identified as a file of investigative interest to child pornography investigations.

Using a computer running investigative BitTorrent software, SA Pena directly connected to the device at IP address **73.42.115.110**, hereinafter referred to as "Suspect Device." The Suspect Device reported it was using BitTorrent client software -AZ5400- Vuze 5.4.0.0.

On December 7, 2014, between 2122 hours and 2159 hours MST, SA Pena completed the download of the following 11 files that the device at IP address **73.42.115.110** was making

available. The device at IP Address **73.42.115.110** was the sole candidate for each download, and as such, each file was downloaded directly from this IP Address.

SA Pena then looked through the file structure of InfoHash: **49cd35df95b12d8dc8c025293d2ad50c24b8c854** and observed that in the folder titled: “9yo jenny full”. This is where the above listed 11 “Files of Interest” were located, along with multiple other image/video files. Some of these files were complete or incomplete and some could be considered “Child Erotica” and “Child Pornography.”

SA Pena reviewed the above listed downloaded image/video files and they are described as follows:

- **pthe 9yo Jenny daughter tied up and dog licking her.avi (SHA1: YF5RM6PHDSCPJIZOND5UKOHOJKCOB7TL) (Located Inside Folder: 9yo jenny full)** This color video or movie is 2 minutes and 6 seconds in length. This video depicts a pre-pubescent female or girl, who is blindfolded, naked, and she is tied at the wrists and ankles. A dog then licks the young girl’s vaginal area and butter is placed on her vaginal area to attract the dog. The young girl is simultaneously performing oral sex on an adult male’s penis. The girl appears to be between 7 and 9 years of age, due to her body size comparison/development, none to very slight breast development and no pubic development.
- **pthe 9yo jenny enoying.avi (SHA1: K5FZ2RRA6LNCGLPU2T5MPCIBGQ2UJ4TV) (Located Inside Folder: 9yo jenny full)** This color video or movie is 2 minutes and 1 second in length. This video depicts a naked pre-pubescent female or girl on a bed, while on her stomach. The young girl also had a black band around her neck. The young girl is seen

performing oral sex on an adult male's penis. The girl appears to be between 7 and 9 years of age, due to her body size comparison/ development, none to very slight breast development and no pubic development.

- **Pthc Ptsc Jenny 9Yo Daughter With Cum In Mouth, New.jpg (SHA1: 2YTDHUPHUIF5SEDEIEY5XPNIY6NJJ66K) (Located Inside Folder: 9yo jenny full)**
This color .jpg image file depicts a young female or girl who is lying down and shown from the neck up. The camera is zoomed in on the young girl's face. The young girl has her mouth opened wide, with a whitish, creamy substance that is consistent with semen inside and outside the young girl's mouth. The girl appears to be under the age of 13, due to her body size comparison/ development.
- **pthe_9yo_jenny_bottomless_in_backseat.JPG (SHA1: SHLRMBD455W5MPJHI3JRC4SRGPYWII6S) (Located Inside Folder: 9yo jenny full)**
This color .jpg image file depicts a partially nude pre-pubescent female or girl with blonde hair, who is wearing a leather strap or dog collar around her neck. In addition, the young girl is wearing a gray t-shirt with the silkscreen print of a penguin cartoon character with its wings raised; beneath the penguin were the words "Not Listening". The young girl has her legs spread apart in a lewd manner and her vagina is visible. The young girl appears to be sitting in the back bench seat of a pickup truck. The girl appears to be between 9 and 11 years of age, due to her body size comparison/ development, none to very slight breast development and no pubic development.
- **pthe_ptsc jenny_9yo daughter swallowing cum, new.jpg (SHA1: KM6XYO5WRYWKIR2JEC2N6HYJ7HISNRAJ) (Located Inside Folder: 9yo jenny full)**
This color .jpg image file depicts a young female or girl who is lying down and shown from the neck up. The camera is zoomed in on the young girl's face. The young girl has her mouth opened wide and her tongue sticking outwards, with a whitish, creamy substance that is consistent with semen inside and outside the young girl's mouth. The girl appears to be under the age of 13, due to her body size comparison/ development.
- **pthe_ptsc jenny_my 9yo naked.jpg (SHA1: XLVEDQ5G7UFP77WT6I6Z732MFPB2XDVU) (Located Inside Folder: 9yo jenny full)**
This color .jpg image file depicts a nude pre-pubescent female or girl who is lying on her back on a multi-patterned quilt. There is a purple towel underneath her back, buttocks, and legs. The young girl's arms are above her head, exposing her chest/breast area. The young girl's legs are spread apart in a lewd manner and displaying her vagina. The girl appears to be between 7 and 10 years of age, due to her body size comparison/ development, none to very slight breast development and no pubic development.
- **pthe_ptsc_9yo jenny in nylons and collar tied up.jpg (SHA1: 2VJDD35GIUYPJKNPED4OHI7ZKW4C3RJC) (Located Inside Folder: 9yo jenny full)**
This color .jpg image file depicts a nude pre-pubescent female or girl who is lying on her back while on a bed, with her arms stretched above her head and her wrists are bound with a yellow rope. The young girl is smiling, and wearing a brown in color "choker" around her neck. The young girl's legs are spread apart in a lewd manner, exposing her vagina and the

vaginal opening in its entirety. The young girl is wearing black thigh high nylons, with her calves meeting the back of her thighs, and each calf is bound to each thigh by yellow rope. The girl appears to be between 7 and 10 years of age, due to her body size comparison/ development, none to very slight breast development and no pubic development.

- **pthc_ptsc_9yo_jenny_enjoying_doggie_cock.JPG (SHA1: YJRJ4Y5RIBV4TPDRBHCEPBZMPIFIOKKF) (Located Inside Folder: 9yo jenny full)** This color .jpg image file depicts a pre-pubescent female or girl who is nude and shown from the stomach upward. The young girl is lying on her right side and underneath a dog. The young girl is performing oral sex on what appears to be the dog's penis, while holding onto the dog's penis with her left hand. The girl appears to be between 8 and 10 years of age, due to her body size comparison/ development, none to very slight breast development.
- **pthc_ptsc_9yo_jenny_naked_collar_nylons_watching_porn.JPG (SHA1: EAXH7NNLQICY6CURHZG3EISHWINP3V2H) (Located Inside Folder: 9yo jenny full)** This color .jpg image file depicts a nude pre-pubescent female or girl who is sitting on the floor with her arms in her lap with a laptop computer near her. The young girl has a brown leather dog collar around her neck and her chest/breast area is visible. This image could be considered "Child Erotica". The girl appears to be between 8 and 10 years of age, due to her body size comparison/ development, none to very slight breast development and no pubic development.
- **pthc_ptsc_9yo_jenny_smiling_with_doggie_cock_in_her_face..looks_like_she_likes_it!!!.JPG (SHA1: CDTNAIIS4UIG2ESEGQV6J65BKQ6WGKBF) (Located Inside Folder: 9yo jenny full)** This color .jpg image file depicts a nude pre-pubescent female or girl bending over with her head under a dog and shown from the stomach upward. The young girl is also holding onto the dogs exposed penis. The girl appears to be between 8 and 10 years of age, due to her body size comparison/ development, none to very slight breast development.
- **pthc_ptsc_9yo_jenny_tied_up_and_collar.JPG (SHA1: CGIYBBZCBF5SE6Z4IEUEOGZG7M2XJOXH) (Located Inside Folder: 9yo jenny full)** This color .jpg image file depicts a pre-pubescent female or girl who is strapped to a bench with black belt looking material and her arms are stretched out above her head, with yellow rope binding her hands together. The young girl is strapped to the bench while on her stomach and she is smiling at the camera. The young girl is shown from the waist upward. The girl appears to be between 8 and 10 years of age, due to her body size comparison/ development, none to very slight breast development.
- The female child in the videos/images located inside **Folder: 9yo jenny full** is the same young girl in all of the images and video inside that folder. This young girl is known to me as an identified victim (Jenny Series) through the National Center for Missing and Exploited Children (NCMEC).

Possessing and distributing these files does constitute a violation of the Sexual Exploitation of Children federal statute Title 18, United States Code, Section 2252 and all of these files are considered child pornography.

On December 7, 2014, SA Pena was conducting an online investigation on the BitTorrent network for offenders sharing child pornography. SA Pena directed his investigative focus to a device at IP address **73.42.115.110 (Port: 6881)**, because it was associated with a torrent with the InfoHash: **d0963f7e33c27d34aaa0a70df5e5f313c1610cb2**. This torrent file references 78 files, at least one of which was identified as being a file of investigative interest to child pornography investigations.

Using a computer running investigative BitTorrent software, SA Pena directly connected to the device at IP address **73.42.115.110**, hereinafter referred to as "Suspect Device." The Suspect Device reported it was using BitTorrent client software - **AZ5400- Vuze 5.4.0.0**.

On December 7, 2014, between 2141 hours and 2252 hours MST, SA Pena successfully completed the download of the following 1 file(s) that the device at IP address **73.42.115.110** was making available. The device at IP Address **73.42.115.110** was the sole candidate for each download, and as such, each file was downloaded directly from this IP Address.

- **_young preteen boys suck and fuck each other.mpg**
P6KPK3I7ETYYMB73XPYEHVNF6VDUN6E3

SA Pena then looked through the file structure of InfoHash: **d0963f7e33c27d34aaa0a70df5e5f313c1610cb2** and observed in the folder titled: "**PTHC TIEM**" inside this folder was the above listed 1 image/video files. There were some other image files inside this folder and they were incomplete or partial downloads and some of these files could be considered "Child Erotica" and "Child Pornography".

SA Pena reviewed the above listed downloaded image/video file and some are described as follows:

- **_young preteen boys suck and fuck each other.mpg (SHA1: P6KPK3I7ETYYMB73XPYEHVNF6VDUN6E3) (Located Inside Folder: PTHC TIEM)** This color video or movie is 16 minutes and 30 seconds in length. The movie begins showing a naked pre-pubescent boy masturbating on a couch. The camera zooms into the young boy's genital area as he masturbates. This activity continues for 2 minutes at which time another young boy enters the room and begins masturbating the first young boy. At 3 minutes into the video, the second young boy begins to take his off cloths. After disrobing, the second young boy has his genitals exposed which show that he is pre-pubescent. The second young boy begins to masturbate his own penis and then he masturbates the first young boy's penis. At 5 minutes and 15 seconds into the video, the second young boy begins to perform oral sex on the first young boy's penis. At 9 minutes and 55 seconds, the first young boy appears to insert his penis into the anus of the second young boy. The first young boy continues to have sex with the second young boy for most of the remaining time in the

movie. These young boys appear to be between 10 and 12 years of age, due to their body size comparison/development, testicular development, and no pubic development.

Possessing and distributing this file does constitute a violation of the Sexual Exploitation of Children federal statute Title 18, United States Code, Section 2252 and this file is considered child pornography.

On December 15, 2014, SA Pena was conducting an online investigation on the BitTorrent network for offenders sharing child pornography. SA Pena directed his investigative focus to a device at IP address **73.42.115.110 (Port: 6881)**, because it was associated with a torrent with the InfoHash: **c377f0ee133a21a58bf2a8bbd3c69fba546ca48c**. This torrent file references 6 files, at least one of which was identified as being a file of investigative interest to child pornography investigations.

Using a computer running investigative BitTorrent software, SA Pena directly connected to the device at IP address **73.42.115.110**, hereinafter referred to as "Suspect Device". The Suspect Device reported it was using BitTorrent client software **AZ5400- Vuze 5.4.0.0**.

Between December 15, 2014, at 2351 hours MST and Tuesday, December 16, 2014, at 0021 hours MST, SA Pena successfully completed the download of the following 4 file(s) that the device at IP address **73.42.115.110** was making available. The device at IP Address **73.42.115.110** was the sole candidate for each download, and as such, each file was downloaded directly from this IP Address.

SA Pena then looked through the file structure of InfoHash: **c377f0ee133a21a58bf2a8bbd3c69fba546ca48c** and observed that in the folder titled: "**Young Linda and friends**" This is where the above listed 4 "Files of Interest" are located. Some of these files were complete or incomplete and some of these files could be considered "Child Erotica" and "Child Pornography."

SA Pena reviewed the above listed downloaded image/video files and are described as follows:

- **Education dad - yvm Daphne (9Yo) - pthc young video models.avi (SHA1: DC4ONQQ6NYHOXSHG4GJ2G2ZODF5ZBYBU) (Located Inside Folder: Young Linda and friends)** This color video or movie with sound/music is 1 minute and 30 seconds in length. This video depicts a nude pre-pubescent female straddling a nude adult male, who is lying on his back. The young girl and the adult male are in a room that has

an island/sea mural on the wall. The young girl then starts rubbing her vagina against the adult male's penis, in a back and forth motion. The video changes to a different view of the young girl and adult male, with her still rubbing her vagina against his penis. The camera zooms in on the young girl's and adult male's genitals. This young girl appears to be between 9 and 10 years of age, due to her body size comparison/development, no breast, and no pubic development.

- **hot spermed little girls mix (porno-lolitas-preteens-reelki.mpeg (SHA1: TO6JGQMYIC6CU4T2TUXUDEB4XUCHC6WD) (Located Inside Folder: Young Linda and friends)** This color/black & white video or movie with sound/music is 7 minutes and 5 seconds in length. The video depicts many clips of various different naked/partially and fully clothed pre-pubescent girls performing oral sex on adult male's penises. Some of the adult males ejaculate on the young girls. There is also anal and vaginal penetration shown between adult males and young girls. There are also some clips depicting adult male's performing oral sex on young girl's vaginas. There are some clips of young girl's performing oral sex on young boy's penises. The young girls and the young boys in these clips appear to be between 4 and 11 years of age, due to their body size comparison/development, no breast development (girls), no testicular development (boys), and no pubic development (girls & boys).
- **Linda_9_yo_pthc_fullswallow!!!.avi (SHA1: BXAL2E7IP6GDJ246RKVQ3XMRZUNEWXTG) (Located Inside Folder: Young Linda and friends)** This color video or movie is 8 minutes and 53 seconds in length. This video depicts a pre-pubescent female or girl on a bed and nude from the waist down. The young girl is wearing a white top, sunglasses, and her hair is pulled back into a pony tail. The young girl lies on her back and her stomach, while her legs are spread apart towards the camera. The young girl then removes all her clothes until she is completely nude. At 2 minutes and 44 seconds, the young girl performs oral sex on an adult male's penis. The adult male finally ejaculates inside the young girl's mouth, which she shows to the camera. This young girl appears to be between 5 and 7 years of age, due to her body size comparison/development, no breast, and no pubic development.
- **Tara ! new ! (pthc) 2007 tara hot 8yr.wmv (SHA1: FYO5OGGRFSJXFLJSCVS24CKQ3SDBXNQA) (Located Inside Folder: Young Linda and friends)** This color video or movie with music is 3 minutes and 20 seconds in length. This video starts with the title: "Tara's Oral Explosion", against a solid screen. The video then depicts a nude pre-pubescent girl lying on a bed and she then performs oral sex on an adult male's penis. The adult male also performs oral sex on the young girl's vagina. The young girl and the adult male are shown in different positions, with the camera zooming in on the oral sex. The adult male then ejaculates on the young girl's face, head, and hands. The end shows the following text against a solid blue screen: "starring 8 year old Tara all footage shot December 31st 2006 music by Duran Duran". This young girl appears to be between 8 and 9 years of age, due to her body size comparison/development, no breast, and no pubic development.

Possessing and distributing this file does constitute a violation of the Sexual Exploitation of Children federal statute Title 18, United States Code, Section 2252 and this file is considered child pornography.

JANUARY 2015

On January 29, 2015, SA Pena was conducting an online investigation on the BitTorrent network for offenders sharing child pornography. SA Pena directed his investigative focus to a device at IP address **73.42.115.110 (Port: 13422)**, because it was associated with a torrent with the InfoHash: **817e0637dd4bdfdb4bc032408da650391d8fd609**. This torrent file references 2809 files, at least one of which was identified as being a file of investigative interest to child pornography investigations.

Using a computer running investigative BitTorrent software, SA Pena directly connected to the device at IP address **73.42.115.110**, hereinafter referred to as "Suspect Device." The Suspect Device reported it was using BitTorrent client software - **AZ5500- Vuze 5.5.0.0**.

On January 29, 2015, between 0337 hours and 0419 hours MST, SA Pena successfully completed the download of the following 444 file(s) that the device at IP address **73.42.115.110** was making available. The device at IP Address **73.42.115.110** was the sole candidate for each download, and each file was downloaded directly from this IP Address.
